

Week05Day02=> Document QA Agent

Created Work Flow:

-> Manual Trigger: Chat Trigger

-> Read/Write Files from Disk: Stored the file to be read

-> Extract from File: extracts content from the file uploaded

-> Basic LLM: ICEPOT Prompt provided to answer for the question asked only from the extracted content of the file uploaded with “Groq chat model – openai/gpt-oss-120b” support.

The screenshot shows the configuration panel for the 'When chat message received' trigger. The panel is divided into 'Parameters' and 'Settings' tabs. The 'Parameters' tab is active, showing the 'Chat URL' field with the value 'http://localhost:5678/webhook/a245975f-9ba8-4ef3-9c83-09ca7c99b5c7/chat'. Below this, there is a toggle for 'Make Chat Publicly Available' which is turned on. The 'Mode' dropdown is set to 'Hosted Chat'. A message box states: 'Chat will be live at the URL above once this workflow is published. Live executions will show up in the 'executions' tab'. The 'Authentication' dropdown is set to 'None'. The 'Initial Message(s)' field contains the text: 'Hi there! 🙌 My name is Nathan. Please upload the file before seeking answer.' The 'Options' section has a toggle for 'Allow File Uploads' which is turned on. At the bottom, there is a '+ Add Field' button. The right side of the panel shows the 'OUTPUT' section with 1 item, listing the following fields: 'action' (sendMessage), 'sessionId' (70a6f71a3e7544e5bfca9de86f6d6947), and 'chatInput' (title).
